

HAPPINESS IN HEALTH

HAPPINESS IN HEALTH

**“and whoever saves a life, it
will be as if they saved all of
humanity” [Qur’an 5:32]**

Proper healthcare systems are still unattainable luxuries in some regions of the world. But preventing illness is not the only challenge. Once an individual becomes ill, access to health care varies widely: many communities have limited access to health care.

Islamic Relief helps save lives through providing access to healthcare for vulnerable communities around the world. Not only does emergency healthcare save lives, routine healthcare can substantially improve the quality of life for many that live through ill-health.

Dialysis support is a lifesaving treatment for patients with kidney disease. However due to the expensive nature of the treatment it's not accessible for many. The free treatment we provide means that the financial burden is lifted for those in need and thereby allowing them access to this lifesaving care.

£50
can provide a
patient with
dialysis support
for a month
in Syria

PROVIDING DIALYSIS SUPPORT

DELIVERING EMERGENCY MEDICAL SUPPLIES AND EQUIPMENT

Emergency healthcare supplies and equipment saves lives. Quality medical supplies such as bandages, medications and anaesthetics are made available to health centres treating those who are most in need. Healthcare systems in many parts of the world rely heavily on equipment to save lives as alternative medical care is not always available.

A rapid medical response saves lives and having the right medical supplies in place helps communities respond to future crises.

£20
can provide
emergency
healthcare
supplies

PROVIDING MEDICAL TREATMENT FOR CHILDREN

Healthcare structures in many countries lack the required resources to provide adequate care, especially paediatric care. We support health centres, in line with local needs and requirements, to ensure that paediatric care is available to children that need care and support.

£91
can provide
paediatric
healthcare
for a child
in Gaza

PROVIDING HEPATITIS SUPPORT

£30
can help
fight hepatitis
in Pakistan

Chronic viral hepatitis is a major public health issue worldwide and mostly affects developing countries. We are educating communities to understand and mitigate the risks of hepatitis infection, helping them develop the best strategies based on academic research. We also help local health services counter hepatitis by providing screening and treatment centres to help fight its spread.

Cataracts are the leading cause of blindness in many countries. Cataract surgery can restore vision, but in rural areas there are barriers like cost and access to healthcare.

By offering this surgery to those in need we are helping them change their lives and overcome a lifelong disability.

£73
can help a
person retain
their sight
in Niger

CATARACT SURGERY

CONSTRUCTING MATERNITY CENTRE

Maternity centres are lifesavers for mothers to be and new-born babies. In some countries giving birth is very dangerous due to the lack of adequate facilities and risks of maternal death and infant mortality. Building a maternity centre with vital equipment, ambulances and medically trained staff changes the risks mothers and babies face, and ultimately saves lives.

£15
can support
the delivery
of a baby
in Mali

MOBILE CLINICS

£73

can provide a
patient with medical
treatment through
a mobile clinic
in Jordan

Mobile clinics work in remote areas and informal settlements like tents, for people that usually face difficulties in reaching healthcare facilities. These clinics reach the most vulnerable people and have proven to be successful in improving the health of communities in need.

THANK YOU!

Thank you for your generous support, allowing us to provide critical healthcare to those most in need. This ranges from providing **emergency healthcare supplies and equipment, medical treatment for children, dialysis support, and mobile clinics**. You are not only saving one life, but you're also providing a vulnerable family a fighting chance to survive.

What's more, the benefits from your donations are long-lasting and become a form of **Sadaqa Jariyah**. Supporting healthcare has a huge effect on communities, the rewards of this are multiplied in this life and the next.
